## **ACKNOWLEDGEMENT**

I would like to express my sincere gratitude to the Associate Dean of the Faculty of Business and my supervisor Prof. Samantha Thelijjagoda for his encouragement, insight, sharing knowledge, and his vast experience in the research field which helped me to complete this thesis successfully. I consider it a great privilege to work under his supervision. I would also like to extend my sincere gratitude to Dr. Ruwan Jayathilaka, Head of Department of Information Management and MBA Coordinator, for the guidance provided to me in preparing the thesis and helping in the successful completion of the same. . I would also like to express special gratitude to my beloved parents for their guidance, support, and blessings. My sincere gratitude also extends to my husband who has shared his knowledge and insight in completing my thesis successfully. Finally, I express my gratitude to the Sri Lankan Institute of Information Technology for offering the opportunity and motivating me directly or indirectly to complete my MBA as my Alma Mater.

## **ABSTRACT**

The purpose of this study is to investigate the adoption of e-business for the success of the fashion industry in Sri Lanka. It sets the light on why the public is reluctant in the adoption of e-business for the fashion industry even during the pandemic. The research was conducted from a deductive approach. Hypotheses were designed based on a rigorous review of the literature. The study adopted a deductive approach having the stratified convenience sample from several areas in Sri Lanka. The data obtained from the survey was analyzed through regression analysis to identify the impact of the variable on the adoption of e-business for the fashion industry. The study concludes that customer attitudes, customer abilities, ICT secure and awareness were the most influencing factors of adoption of e-business for the fashion industry according to the customer perspective. All previous studies referred to in this study have been carried out in the pre-COVID19 environment. The present study is also significant since the study also considers the effects of the pandemic. The study argues that the contradictory nature observed in perceived ease of use and perceived risk, security, and privacy concerns which were well established in previous studies is caused by the pandemic. The study was also significant since computer and internet literacy has not been tested in the Sri Lankan context in the near past and leads for recommendations that would enhance e-business to the successful fashion industry.
